## PROJECTS

### 1. Hospital Management System

**Technologies used:** Java, Servlet, MySQL

**Description:** Built an online hospital management system allowing users to browse and book doctor appointments, user authentication, and role-based authorization. Designed and optimized the MySQL database for efficient data retrieval and management

### 2. SheyHealth

**Technologies used:** MERN

**Description:** SheyHealth is a hospital management system built with the MERN stack. It manages patient records, appointments, billing, and staff operations, enabling efficient communication and data access. Designed to streamline hospital workflows, it supports accurate and effective healthcare delivery

### 3. Tip Calculator

**Technologies:** Python

**Description:** Created a simple, interactive tip calculator in Python. It prompts users for the bill amount, desired tip percentage, and number of people, then calculates and displays the amount each person should pay. Focused on user input handling and basic arithmetic operations
